Revision History

Name	Date	Reason For Changes	Version
Syntax Squad	September 2026	Initial draft of SRS	1.0

1.Introduction

1.1 Purpose

The purpose of this Software Requirements Specification (SRS) is to clearly describe the requirements of the **Crime Reporting and Case Management System**. This document explains what the system should do and how it should work.
Our system is a web-based platform that allows citizens to report crimes online in an easy and organized way. After a crime is reported, police officers can check and verify the report and take the necessary steps for investigation. Our system also allows administrators to manage users, police officers, and different crime categories from one centralized system.
This SRS document describes both the **functional** and **non-functional** requirements of the system. It will help the development team, **Syntax Squad**, understand the system properly and use these requirements during the design, development, and testing phases. It will also help evaluators and other stakeholders understand the main features and expected behavior of the system.

1.2 Intended Audience and Reading Suggestions

This document is intended for the project supervisor/evaluator, the development team, including developers, UI designers, and testers, and any future contributors who may work on the Crime Reporting and Case Management System.
Different readers can focus on different sections of this document. Developers and testers can mainly focus on the External Interface Requirements, Analysis Models, and System Features sections to understand how the system should work. Supervisors, evaluators, and academic reviewers can focus on the Introduction, Overall Description, and Non-functional Requirements sections to understand the purpose, scope, and quality requirements of the system.
It is recommended to read this document in order. The document starts with the overall scope and product description, followed by the interface requirements and analysis models, including the Use Case and ER diagrams. Finally, it describes the detailed system features and non-functional requirements. This structure helps readers understand the system step by step.

1.3 Product Scope

Crime Reporting and Case Management System is a web-based application designed to make the process of reporting and managing crimes easier and more organized. Instead of using manual paperwork or spreadsheets, the system provides a centralized platform where **Citizens, Police Officers, and Administrators** can perform their respective tasks.
Citizens can create an account, submit crime reports, and attach supporting evidence such as images or PDF documents. They can also check the current status of their submitted reports. Police officers can view new crime reports, review and verify them, reject invalid reports, update the investigation status, and add necessary investigation remarks. Administrators are responsible for managing citizen and police officer accounts, managing different crime categories, and monitoring the overall system through a summary dashboard.
The scope of this project is limited to a **Minimum Viable Product (MVP)** that can be completed within one academic semester. Some advanced features are not included in the current version of the system. These include **AI-based crime prediction, face recognition, a dedicated mobile application, GPS tracking, SMS/email notifications, crime heat maps, live chat support, and court or prison management**. These features may be considered as possible improvements for future versions of the system.

2. Overall Description

2.1 Product Perspective

Crime Reporting and Case Management System is a new, independent web-based application designed to make crime reporting and case management easier. It connects three types of users: **Citizens, Police Officers, and Administrators**.

Our system follows a simple **three-tier architecture**: the **Presentation Layer** for the web interface, the **Application Layer** for PHP-based system logic, and the **Data Layer** using a MySQL database. Citizens can submit crime reports, police officers can verify and investigate them, and administrators can manage users, crime categories, and overall system activities.

The relationship between these components is shown in the **System Architecture Diagram.**

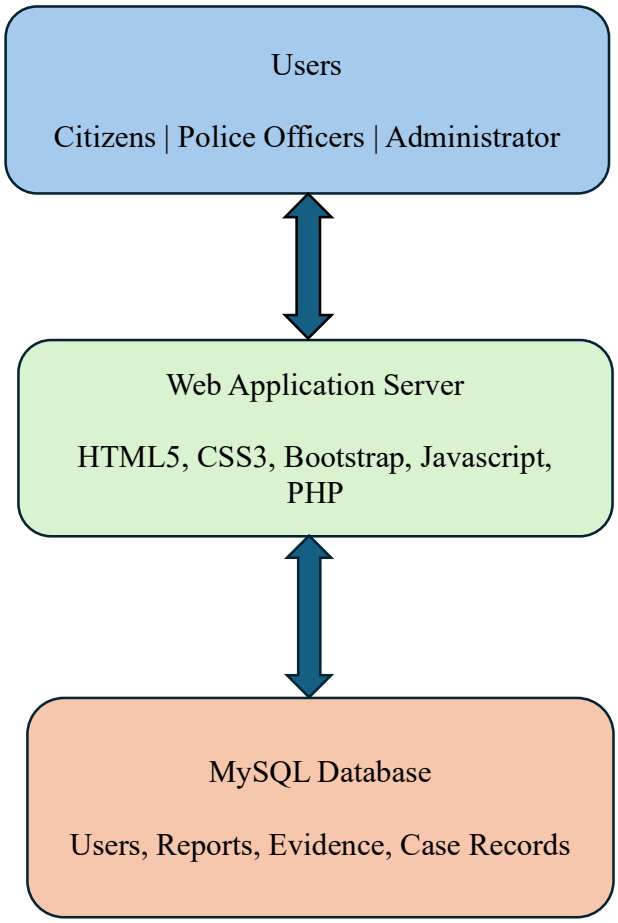

Figure : System Architecture Diagram

2.2 Product Functions

The main functions of **Crime Reporting and Case Management System** are divided according to the three types of users.

Citizen Functions
[1] Register, login, and logout.
[2] Reset forgotten password.
[3] View and update profile information.
[4] Submit crime reports with category, description, date, and location.
[5] Upload supporting evidence such as images or PDF files.
[6] Track report status and view previous reports.
[7] Access help, safety guidelines, emergency contacts, and FAQs.

Police Officer Functions
[1] Securely login and logout.
[2] View crime reports submitted by citizens.
[3] Verify or reject crime reports.
[4] Update investigation status.
[5] Add investigation remarks.
[6] Search and filter reports by category or status.

Administrator Functions
[1] Manage citizen and police officer accounts.
[2] Add, update, and remove crime categories.
[3] View all submitted reports.
[4] Monitor system activities through dashboard statistics.

System-wide Functions
[1] Role-based login and access control.
[2] Secure evidence file upload.
[3] In-system notifications.
[4] Search and filter options.
[5] Basic dashboard analytics.

2.3 User Classes and Characteristics

Citizen
Citizens are users who report crimes through the system. They can register, log in, manage their profile, submit crime reports, upload evidence, track report status, view report history, and access help resources. The interface should be simple and easy to use.

Police Officer
Police Officers are responsible for reviewing and investigating crime reports. They can log in securely, view submitted reports, verify or reject reports, update investigation status, add investigation remarks, and search or filter reports.

Administrator
Administrators are responsible for managing and monitoring the overall system. They can manage Citizen and Police Officer accounts, manage crime categories, view all crime reports, and monitor system activities through the dashboard.

2.4 Operating Environment

Crime Reporting and Case Management System is a web-based application that can be accessed through modern web browsers on operating systems such as **Windows, macOS, and Linux**.
For the academic version, the system runs on a local server using **XAMPP**, which provides Apache, PHP, and MySQL. The front-end uses **HTML5, CSS3, Bootstrap, and JavaScript**, while **PHP** is used for the back-end and **MySQL** stores the system data. Our project is developed using **Visual Studio Code**, with **Git and GitHub** used for version control.
Users need an internet connection or access to the local XAMPP server to use the system.

2.5 Design and Implementation Constraints

Our system is developed as an **MVP** for completion within one academic semester. Therefore, advanced features such as AI crime prediction, face recognition, mobile apps, GPS/Google Maps, SMS/email notifications, crime heat maps, live chat, and court/prison management are not included.
Our system has three role-based interfaces: **Citizen, Police Officer, and Administrator**. Users can only access features allowed for their role. Evidence uploads are limited to **images and PDF files**, with file type and size validation for security.
Our system runs on a local **XAMPP server**, so its availability and scalability are limited to the development and demonstration period.

2.6 Assumptions and Dependencies

We developed and tested our Crime Reporting and Case Management System using **XAMPP (Apache, PHP, MySQL)** on Windows/Linux/macOS. We used **VS Code** for development and **Git/GitHub** for version control.

In our system, only **Citizens** can submit crime reports, and each report belongs to one crime category managed by the **Administrator**. Citizens can upload supporting evidence in image or PDF format.

Our system is mainly designed for **academic use and demonstration**. Therefore, features such as production-level scalability, SMS/email services, payment systems, and map APIs are not included in our current version.

3. External Interface Requirements

3.1 User Interfaces

➡ Home / Landing Page

Our home page is designed to be **simple and user-friendly**, so that Citizens can easily understand and use the system.

It includes a short introduction to our Crime Reporting and Case Management System, along with **Login, Register, and Help & Resources** options. Separate login options are provided for **Citizens and Police Officers**, as they use different dashboards.

➡ Citizen Registration Page

Our Citizen Registration Page allows new Citizens to create an account by providing their **name, email/phone number, and password**.

After successful registration, the Citizen is redirected to the **Login Page**. If the provided email or phone number is invalid or already registered, our system shows an error message and asks the Citizen to enter valid information.

A **Forgot Password** option is also available to help Citizens reset their password when needed.

➡ Login Page (Citizen / Police Officer)

Our Login Page allows registered **Citizens and Police Officers** to log in using their registered email/phone number and password.

After a successful login, users are redirected to their respective **dashboard**, and their name is shown in the top navigation bar.

If the email/phone number or password is incorrect, our system displays an **error message** and asks the user to enter valid login information.

➡ Citizen Dashboard

Our **Citizen Dashboard** provides quick access to **Submit a Report, Track My Reports, View Report History, Edit Profile, and Help & Resources**.

It also shows a summary of the Citizen's reports, including the number of **Open, In Progress, and Resolved** reports.

➡ **Submit Crime Report Page**
Our **Submit Crime Report Page** allows Citizens to select a crime category, provide a description, and enter the **date and location** of the incident.
Citizens can also upload supporting evidence such as **images or PDF files**.
After clicking **Submit**, our system validates and saves the report and makes it available to Police Officers. A **confirmation message and report reference number** are then shown to the Citizen.

➡ **Track Report / Report History Page**
Our **Track Report / Report History Page** shows all crime reports submitted by the logged-in Citizen along with their current status, such as **Pending, Verified, Rejected, Under Investigation, and Resolved**.
Citizens can select a report to view its **full details, investigation remarks, and status history** through a simple timeline.

➡ **Help and Resources Page**
Our **Help and Resources Page** provides Citizens with useful information, including **emergency contact numbers, safety guidelines, and FAQs**. This page helps users understand the crime reporting process and use our system more easily.

➡ **Police Officer Dashboard**
Our **Police Officer Dashboard** displays all crime reports submitted by Citizens. Police Officers can **search and filter** reports by category or status.
Each report provides actions such as **Verify, Reject, Update Status, and Add Remark** to support the investigation process.

➡ **Report Verification / Investigation Page**
Our **Report Verification / Investigation Page** shows the complete details of a selected crime report, including any attached evidence.
Police Officers can **verify or reject** a report. If rejected, they can provide a reason. They can also **update the investigation status and add remarks**, which are visible to the Citizen who submitted the report.

➡ **Administrator Dashboard**
Our **Administrator Dashboard** shows summary information such as the **total number of reports, reports by status, and reports by category**.
It also provides quick access to **Manage Citizens, Manage Police Officers, Manage Crime Categories, and View All Reports**.

➡ **Manage Citizens / Manage Police Officers Pages**
Our **Manage Citizens** and **Manage Police Officers** pages display all registered accounts for the respective role. The Administrator can **add, update, or remove** user accounts when needed.

➡ **Manage Crime Categories Page**
Our **Manage Crime Categories Page** allows the Administrator to **add, rename, or remove crime categories**. These categories are automatically shown in the Citizen's **Submit Crime Report** dropdown.

3.2 Software Interfaces
Our Crime Reporting System uses the following software technologies:
[1] HTML5, CSS3, Bootstrap, and JavaScript are used for the front-end interface.
[2] PHP is used for the back-end logic and runs on the Apache server provided by XAMPP.
[3] MySQL is used to store user accounts, crime reports, evidence information, crime categories, and investigation remarks.
[4] Evidence files such as **images and PDF documents** are stored in the designated uploads folder.
[5] Our application validates and processes data between the user interface and the MySQL database, including **registration, login, report submission, and status updates**.

3.3 Communications Interfaces
[1] Our Crime Reporting System is accessed through a standard **web browser** using HTTP over the internet or local network, depending on the XAMPP server setup.
[2] Our system provides **in-system notifications** to Citizens when their report status changes and alerts Police Officers when a new report is submitted.
[3] SMS and email notifications are not included in our current version and may be added as future enhancements.

4. Analysis Models
4.1 Citizen Use Case Diagram
The **Citizen Use Case Diagram** shows the main activities that Citizens can perform in our Crime Reporting System. These include **registration, login, profile management, submitting crime reports, uploading evidence, and tracking reports**.
Upload Evidence is shown as an optional extension of **Submit Crime Report**, because Citizens can submit a report without attaching evidence.

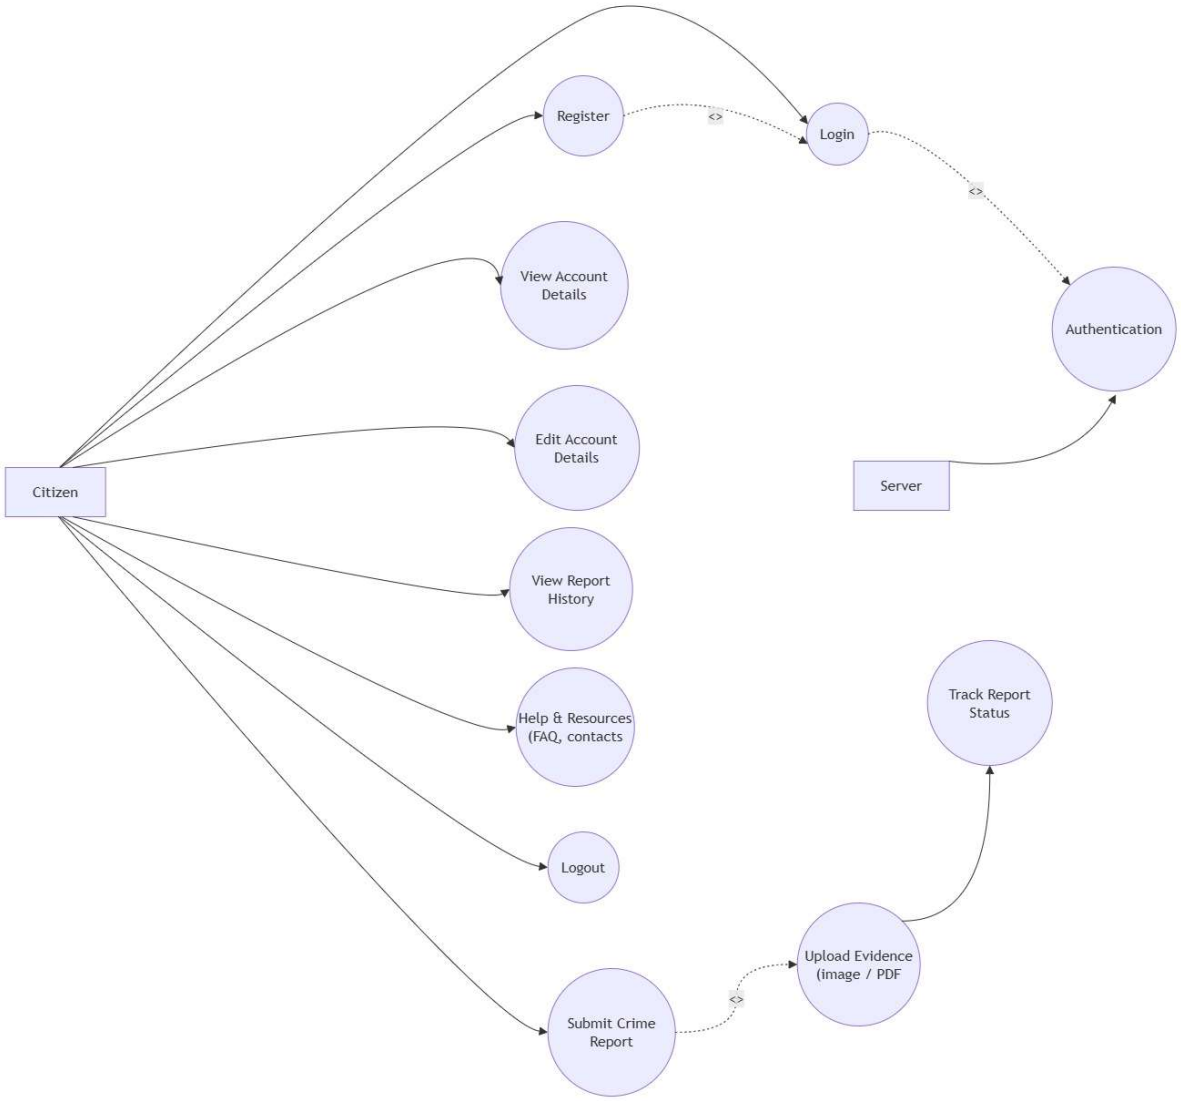

Figure: Citizen Use Case Diagram

4.2 Police Officer Use Case Diagram

The **Police Officer Use Case Diagram** shows the main activities that Police Officers can perform in our Crime Reporting System. These include **viewing crime reports, verifying or rejecting reports, updating investigation status, and adding investigation remarks**.

Reject Report is treated as an alternative outcome of the report verification process, while **Add Investigation Remarks** is connected with **Update Investigation Status**.

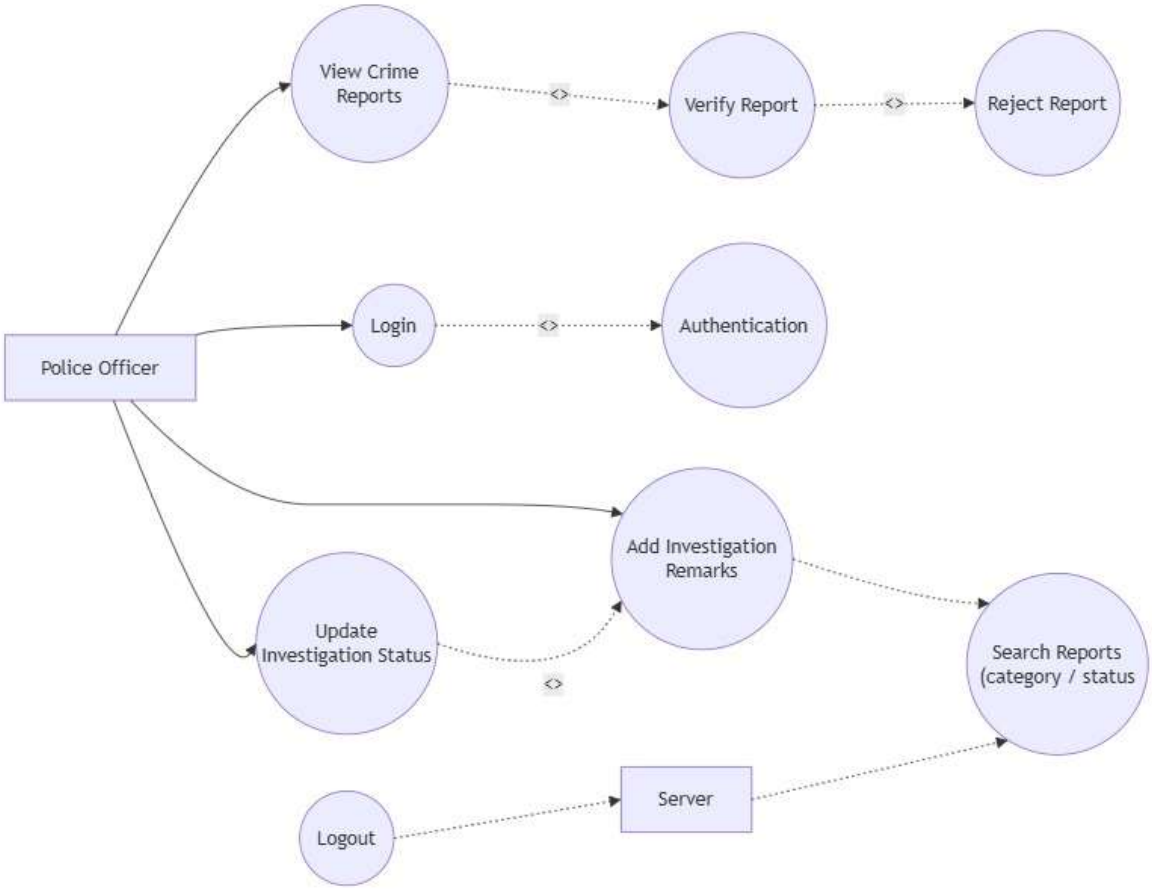

Figure: Police Officer Use Case Diagram

4.3 Administrator Use Case Diagram

The **Administrator Use Case Diagram** shows the main activities that Administrators can perform in our Crime Reporting System. These include **managing Citizen and Police Officer accounts, managing crime categories, viewing all reports, and monitoring the system through the dashboard**.

Add / Update / Remove Account is a common function used for managing both Citizen and Police Officer accounts.

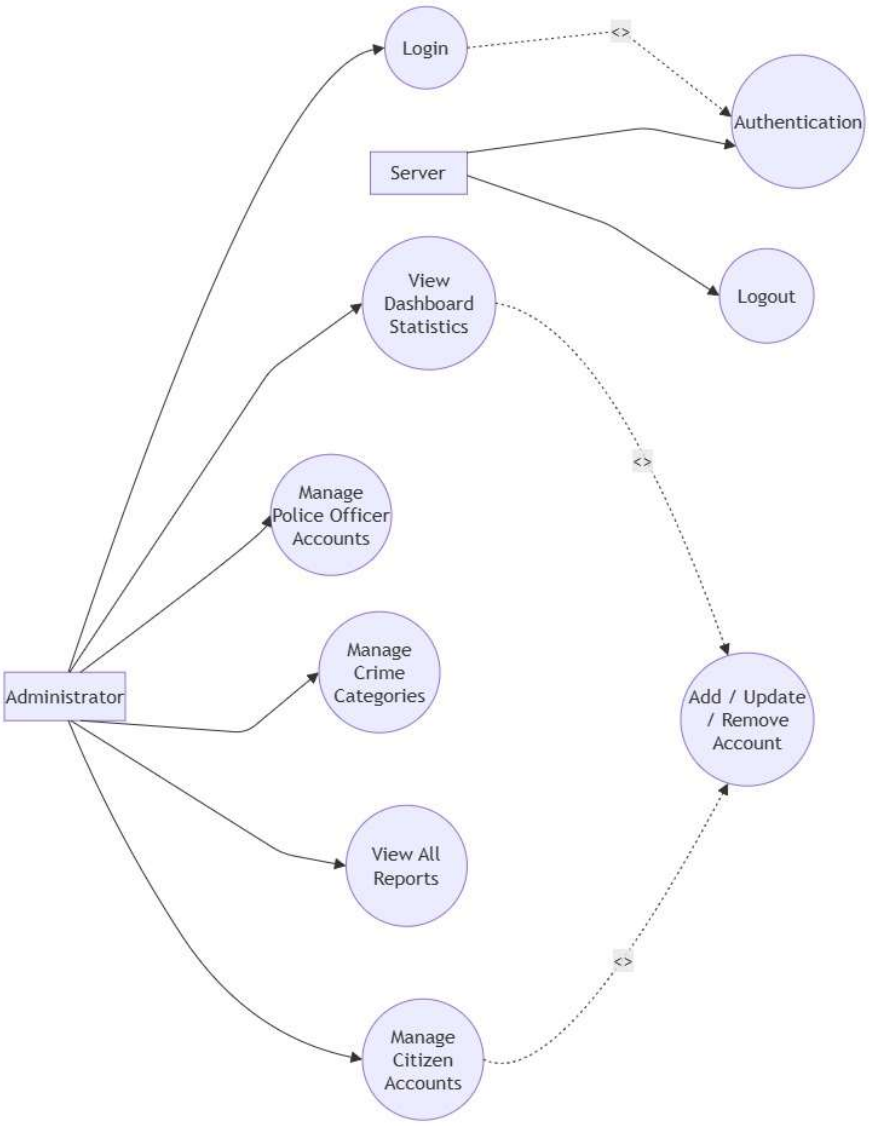

Figure: Administrator Use Case Diagram

4.4 ER Diagram

The **ER Diagram** of our Crime Reporting System shows the main entities and their relationships. These include **Citizen, Crime Report, Police Officer, Evidence, Crime Category, Investigation Remark, and Administrator**.

The diagram helps us understand how these entities are connected and how data is stored and managed in our system.

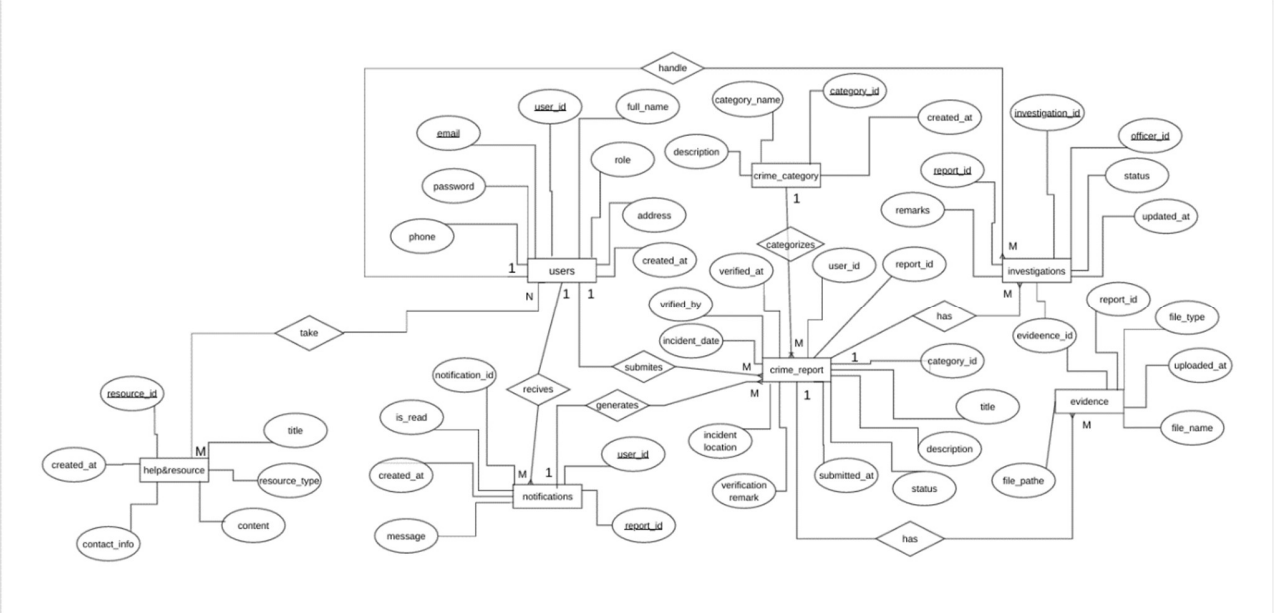

Figure: ER Diagram

4.5 System Architecture Diagram

Our **System Architecture Diagram** shows the three main layers of our Crime Reporting System: the **Presentation Layer**, **Application Layer, and Database Layer**.

Citizens, Police Officers, and Administrators interact with the system through the presentation layer. The **PHP-based application layer** processes the system logic, while the **MySQL database** stores and manages the system data.

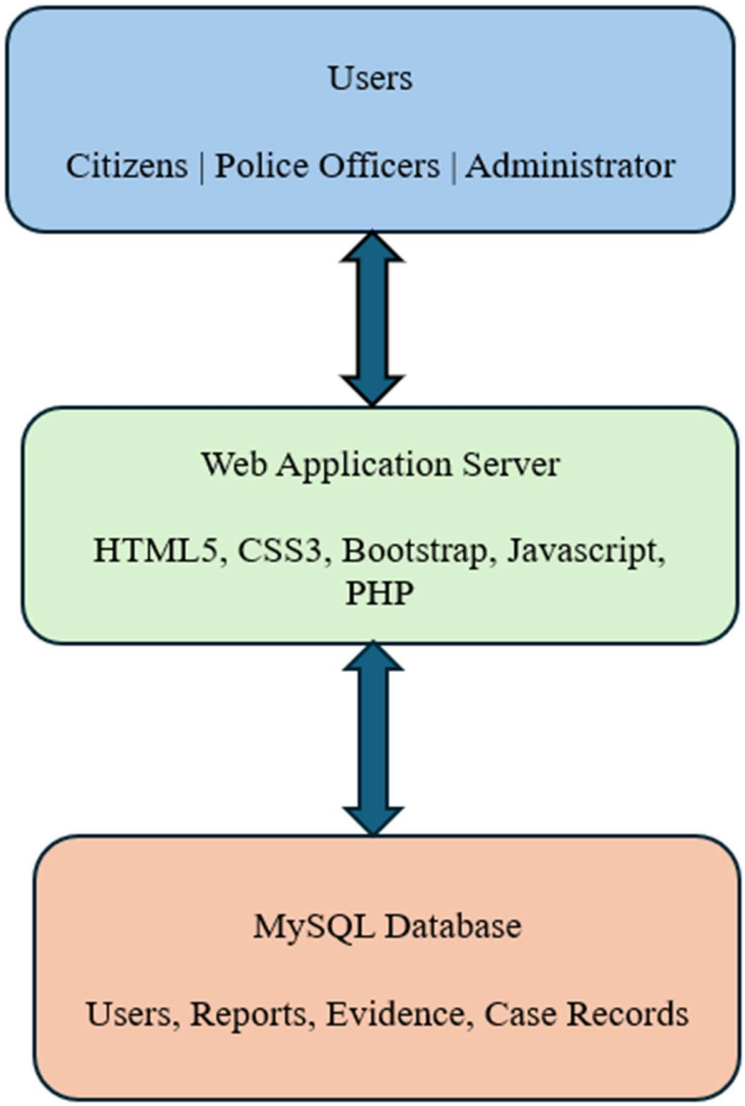

Figure: System Architecture Diagram

5. System Features

5.1 User Accounts

5.1.1 Description and Priority

In our system, **Citizens and Police Officers must have registered accounts** to access the system. Citizens can create their own accounts, while Police Officer accounts are managed by the Administrator.
Both Citizens and Police Officers can **log in, view their profile, and update their account information**.
Priority Level: High

5.1.2 Stimulus/Response Sequences

A new Citizen selects **Register** from the home page and enters the required information. After successful validation, our system creates the account and redirects the user to the **Login Page**.
A registered user selects **Login** and enters their credentials. If the information is correct, our system redirects the user to their **role-specific dashboard**.
To update account information, the user selects **Edit Profile**, changes the required details, and clicks **Save Changes**.

5.1.3 Functional Requirements

FR-01: Register (Citizen)
[1] User: Citizen
[2] Input: Name, email/phone number, and password
[3] Output: Account is created successfully and the Login Page is displayed.
[4] Alternative Flow: If the email/phone number is invalid or already registered, our system asks the user to enter valid information.

FR-02: Login / Logout
[1] User: Citizen and Police Officer
[2] Input: Registered email/phone number and password
[3] Output: On successful login, the respective dashboard is displayed. After logout, the user is redirected to the Login Page.
[4] Alternative Flow: If the login information is incorrect, our system shows an error message and asks the user to try again.

FR-03: Forgot Password
[1] User: Citizen and Police Officer
[2] Input: Registered email/phone number through the **Forgot Password** option
[3] Output: The user can reset the password and log in with the new password.
[4] Alternative Flow: If the email/phone number is not registered, our system displays an error message.

FR-04: View / Edit Account Details
[1] User: Citizen and Police Officer
[2] Input: View or edit profile information and click **Save Changes**
[3] Output: Account information is displayed or updated successfully.
[4] Alternative Flow: If invalid information is entered, our system asks the user to provide valid details.

5.2 Crime Report Submission

5.2.1 Description and Priority
In our system, a logged-in **Citizen** can submit a crime report by selecting a crime category, describing the incident, and providing the **date and location**. The Citizen can also upload supporting evidence such as **images or PDF files**. After submission, the report becomes available to Police Officers for review.
Priority Level: High

5.2.2 Stimulus/Response Sequences
The Citizen selects **Submit a Report**, chooses a crime category, enters the incident details, and optionally attaches evidence. After clicking **Submit**, our system validates and saves the report. A **confirmation message with a report reference number** is displayed, and the report becomes visible on the Police Officer Dashboard.

5.2.3 Functional Requirements

FR-05: Submit Crime Report
[1] User: Citizen
[2] Input: Crime category, description, date, and location
[3] Output: Report is submitted successfully and a reference number is displayed.
[4] Alternative Flow: If any required field is missing, our system asks the Citizen to complete the form.

FR-06: Upload Supporting Evidence
[1] User: Citizen
[2] Input: One or more image or PDF files
[3] Output: Evidence files are uploaded and linked to the crime report.
[4] Alternative Flow: If the file type is unsupported or the file is too large, our system asks the Citizen to select a valid file.

5.3 Report Tracking and History

5.3.1 Description and Priority
In our system, Citizens can check the current status of their submitted reports, such as **Pending, Verified, Rejected, Under Investigation, and Resolved**. They can also view their previous reports and any investigation remarks added by Police Officers.
Priority Level: High

5.3.2 Response Sequences
The Citizen selects **Track My Reports** or **Report History** from the dashboard. Our system displays the submitted reports with their current status. By selecting a report, the Citizen can view its **details, status history, and investigation remarks**.

5.3.3 Functional Requirements

FR-07: Track Report Status
[1] User: Citizen
[2] Input: Selects **Track My Reports** and chooses a report
[3] Output: Current status and status history are displayed.
[4] Alternative Flow: None

FR-08: View Report History
[1] User: Citizen
[2] Input: Selects **Report History** from the dashboard
[3] Output: All previously submitted reports and their outcomes are displayed.
[4] Alternative Flow: If there are no previous reports, our system displays an **empty history message**.

5.4 Help and Resources

5.4.1 Description and Priority
Our system provides a **Help and Resources** section to help Citizens understand the reporting process and get useful guidance. It includes **emergency contact numbers, safety guidelines, and FAQs**.
Priority Level: Medium

5.4.2 Functional Requirements

FR-09: Access Help and Resources
[1] User: Citizen
[2] Input: Clicks **Help & Resources** from the home page or dashboard
[3] Output: Emergency contacts, safety guidelines, and FAQ information are displayed.
[4] Alternative Flow: None

5.5 Police Officer Report Management

5.5.1 Description and Priority
In our system, **Police Officers** can review and manage crime reports submitted by Citizens through a secure dashboard. They can **verify or reject reports, update investigation status, add investigation remarks, and search or filter reports**.
Priority Level: High

5.5.2 Stimulus/Response Sequences

The Police Officer logs in through the dedicated login page and accesses the **Police Officer Dashboard**. From the dashboard, the officer can select a report to view its details, then **verify or reject the report, update its status, and add remarks**.
The officer can also use the **search bar and filters** to quickly find specific reports.

5.5.3 Functional Requirements

FR-10: Police Officer Login
[1] User: Police Officer
[2] Input: Registered email/phone number and password
[3] Output: Police Officer Dashboard is displayed after successful login.
[4] Alternative Flow: If the credentials are incorrect, our system displays an error message.

FR-11: View Crime Reports
[1] User: Police Officer
[2] Input: Police Officer Dashboard
[3] Output: Available crime reports are displayed in a list.
[4] Alternative Flow: None

FR-12: Verify or Reject a Report
[1] User: Police Officer
[2] Input: Selects **Verify** or **Reject** from the report details.
[3] Output: Report status is updated to **Verified** or **Rejected**, and the Citizen is notified.
[4] Alternative Flow: A reason must be provided when rejecting a report.

FR-13: Update Investigation Status
[1] User: Police Officer
[2] Input: Selects a new investigation status and clicks **Update**.
[3] Output: The report status is updated and visible to the Citizen.
[4] Alternative Flow: None

FR-14: Add Investigation Remarks
[1] User: Police Officer
[2] Input: Enters remarks and clicks **Save**.
[3] Output: The remarks are saved and visible to the Citizen.
[4] Alternative Flow: None

FR-15: Search Reports
[1] User: Police Officer
[2] Input: Enters keywords or selects category/status filters.
[3] Output: Matching reports are displayed.
[4] Alternative Flow: If no report matches, our system displays **"No results found."**

5.6 Administrator Management

5.6.1 Description and Priority

In our system, **Administrators** manage the overall platform. They can manage **Citizen and Police Officer accounts, crime categories, view all reports, and monitor system activity** through the dashboard.
Priority Level: High

5.6.2 Response Sequences

The Administrator logs in and accesses the **Administrator Dashboard**, where summary statistics and management options are available.
The Administrator can access **Manage Citizens, Manage Police Officers, Manage Crime Categories, and View All Reports**. From the management pages, the Administrator can **add, update, or remove** the required records.

5.6.3 Functional Requirements

FR-16: Manage Citizen Accounts
[1] User: Administrator
[2] Input: Adds, edits, or removes a Citizen account and clicks **Save**.
[3] Output: The Citizen account list is updated.
[4] Alternative Flow: If invalid information is entered, our system asks the Administrator to enter valid details.

FR-17: Manage Police Officer Accounts
[1] User: Administrator
[2] Input: Adds, edits, or removes a Police Officer account and clicks **Save**.
[3] Output: The Police Officer account list is updated.
[4] Alternative Flow: If invalid information is entered, our system asks the Administrator to enter valid details.

FR-18: Manage Crime Categories
[1] User: Administrator
[2] Input: Adds, renames, or removes a crime category and clicks **Save**.
[3] Output: The crime category list available to Citizens is updated.
[4] Alternative Flow: If a category name already exists, our system asks the Administrator to choose a different name.

FR-19: View All Reports
[1] User: Administrator
[2] Input: Selects **View All Reports** from the dashboard.
[3] Output: All submitted reports and their current status are displayed.
[4] Alternative Flow: None

FR-20: View Dashboard Statistics
[1] User: Administrator
[2] Input: Administrator Dashboard loads after login.
[3] Output: Summary information such as **total reports, reports by status, and reports by category** is displayed.
[4] Alternative Flow: None

5.7 Other System Features

5.7.1 Role-based Authentication
Our system provides **role-based access** for Citizens, Police Officers, and Administrators. Each user can only access the features available for their role. If a user tries to access an unauthorized page, our system shows an **access denied message or redirects them to their dashboard**.

5.7.2 In-system Notifications
Our system provides **in-system notifications** to Citizens when their report status changes and to Police Officers when a new report requires their attention.

5.7.3 Search and Filter
Our system provides **search and filter options** to help users find reports quickly. Reports can be filtered by **category, status, or keyword** where applicable.

5.7.4 Basic Dashboard Analytics
The **Administrator Dashboard** displays basic statistics such as **total reports, reports by status, and reports by category** to provide a quick overview of system activity.

6. Other Nonfunctional Requirements

6.1 Performance Requirements
Our system should respond to common actions such as **login, report submission, and status updates within a few seconds** under normal conditions.
The database should be able to handle an increasing number of **users, reports, and evidence files** during development and demonstration without major performance issues.
Since our project is an **academic MVP running on a local XAMPP server**, large-scale load testing and production-level performance are not included in the current scope.

6.2 Safety Requirements
Our system stores important information such as **user details, crime reports, and evidence files**, so reasonable measures should be taken to protect this data.
We should maintain **regular database backups** during development to prevent data loss.
Citizens should also be advised not to include unnecessary highly sensitive information in their crime reports.

6.3 Security Requirements

Our system should protect user information and prevent unauthorized access. Passwords must be stored in **hashed form**, not as plain text.
Each role **Citizen, Police Officer, and Administrator**—can only access the features assigned to that role. Users cannot access another user's information or another role's dashboard.
Evidence uploads are checked to allow only **supported image and PDF files** within the allowed size limit. User sessions and all important data-changing forms are also validated to improve system security.

6.4 Software Quality Attributes

Usability:
Our system should have a **simple and user-friendly interface** so that Citizens can submit reports easily.

Reliability:
The system should properly save **reports, user information, and status updates** without data loss during normal use.

Scalability:
Our database should support adding more **users, reports, and crime categories** without major changes.

Maintainability:
The system is divided into separate **Citizen, Police Officer, and Administrator modules**, making it easier for our team to maintain and update the system.

Availability:
Our system should remain accessible on the **local XAMPP server** during development and demonstration.

Testability:
Each module should be easy to test separately as well as together to ensure that the complete system works correctly.

6.5 Business Rules

Our system has three roles: **Citizen, Police Officer, and Administrator**, and each role has different permissions.
[1] Citizens: Can register, submit crime reports, upload evidence, and track report history.
[2] Police Officers: Can view, verify, reject, and investigate crime reports.
[3] Administrators: Can manage users, crime categories, and monitor all reports.
[4] Police Officer and Administrator accounts are created or managed by the Administrator.
[5] Each crime report must belong to **one crime category** maintained by the Administrator.
[6] A report can only be marked **Resolved after it has been Verified** by a Police Officer.

7. Other Requirements

Our Crime Reporting System keeps **Citizen, Police Officer, and Administrator data** properly separated in the database so that each role can access only the information and features allowed to them.
Our system also allows the Administrator to **add, update, and remove crime categories** without changing the main system code.
The main deliverables of our project include:
[1] Software Requirements Specification (SRS)
[2] ER Diagram, Use Case Diagrams, and System Architecture Diagram
[3] Working system with **Citizen, Police Officer, and Administrator modules**
[4] Source code with version history maintained on GitHub
[5] Testing Report covering major system functions
[6] User Manual for using the system
[7] Final Presentation Slides

Our project is planned to be completed within a **16-week academic semester**, including requirement analysis, design, development, integration, testing, and documentation.

Appendix A: Glossary

1. **Citizen:** A user who can register, submit crime reports, upload evidence, and track reports.
1. **Police Officer:** A user who can review, verify, reject, and investigate crime reports.
2. **Administrator:** A user who manages accounts, crime categories, and overall system activities.
3. **Crime Report:** A report submitted by a Citizen containing information about a crime incident.
4. **Evidence:** An image or PDF file attached to support a crime report.
5. **Crime Category:** A type or classification of crime, such as theft, assault, or fraud.
6. **Investigation Remark:** A note added by a Police Officer about the investigation progress or findings.
7. **Verification:** The process of checking a crime report by a Police Officer before investigation.
8. **MVP:** Minimum Viable Product --- the basic working version of our system developed within the academic project scope.
9. **XAMPP:** A local server package that provides Apache, PHP, and MySQL for developing and running our system.
10. **Role-Based Access Control:** A security system that allows users to access features based on their assigned role.

Appendix B: Field Layouts

Fields with information required for Login

Field	Length	Data Type	Is Mandatory
Email id / Phone No.	30	Alphanumeric	Y
Password	16	Alphanumeric	Y

Fields with information required for Crime Report Submission

Field	Length	Data Type	Is Mandatory
Category	30	String (dropdown)	Y
Description	1000	String	Y
Date of Incident	10	Date	Y
Location	100	String	Y
Evidence File	N/A	Image / PDF	N

Appendix C: Requirement Traceability Matrix

Req ID	Brief Description	Design Reference	Status
FR- 01	Citizen Registration	Section 4.1, Section 5.1	Planned
FR- 02	Log In / Log Out	Section 4.1-4.3, Section 5.1	Planned
FR- 03	Forgot Password	Section 5.1	Planned
FR- 04	View / Edit Account Details	Section 4.1-4.3, Section 5.1	Planned
FR- 05	Submit Crime Report	Section 4.1, Section 5.2	Planned
FR- 06	Upload Evidence	Section 4.1, Section 4.4, Section 5.2	Planned
FR- 07	Track report status	Section 4.1, Section 5.3	Planned
FR- 08	View report history	Section 4.1, Section 5.3	Planned
FR- 09	Help and Resources	Section 4.1, Section 5.4	Planned
FR- 10	Police officer login	Section 4.2, Section 5.5	Planned
